

EMP5211

MOBILE POS FOR PUBLIC TRANSPORTATION

The EMP5211 mobile POS has been designed to meet the new needs of electronic payment in the public transportation fare collection systems with its own operating system combining high performance and multi-functionality.

This equipment combines traditional intelligent vehicle payment terminal systems with new payment technologies processing capacities and the capability to integrate upcoming technologies not currently on the market as well.

While covering the traditional existing on-line card payment systems, the unit accepts Alipay, micro-credit and other payment codes, including the UnionPay cloud Flash, ODA (Offline Data Authentication) and other on-line credit card payment methods. The product is equipped with the GPS function giving instant and accurate positioning of the vehicle in real time, WIFI and Blue Tooth functions making programming and updating the equipment easy and fast.

The EMP5211 is the perfect solution for public transportation quick fare payment, and vehicle control.
